

Higher mobility for Atofina's operators

ATOFINA uses ALERT for the transmission of alarms on ASCOM

Atofina's factory located in Feysin-Balan integrates Alert for the supervision of its PVC manufacturing process and for the automatic transmission of the technical alarms for maintenance operators.

The alarms managed by ALERT come from a Delta V supervision system installed in redundancy via OPC link. Delta V is a product developed and commercialised by Fisher Rosemount.

The alarms are transmitted to the operators present on the site as written messages via an ASCOM person research system.
